

Event System Pro - Application Rules

Plain-language summary of rules, restrictions, and constraints accumulated for the Event System Pro front-end (Judging page and related flows).

General layout and navigation

- Main content blocks (messages, buttons, fields, dropdowns) are capped at 360px wide and centered.
- Default route is Login (/). Unknown URLs redirect to login.
- Staff reaches Judging via Staff -> Contest, which goes to /judging.
- Judging Submit and Back to Staff both return to /staff.
- Login currently accepts any credentials and goes to /home (no real auth yet).

Judging page - competitor data

- Each session shows 20 couples (accordion rows).
- Each couple has a bib number (1-999, unique within the set, sorted ascending), a Leader, and a Follower (first + last name).
- Names come from Legion of Super-Heroes (DC) and Shi'ar Imperial Guard (Marvel-inspired) pools.
- Each character has a sex value (male or female) based on common comic portrayals.

Name selection rules

- Leader: pick a male character 90% of the time.
- Follower: pick a female character 90% of the time.
- The other 10% can be anyone still available in the pool.
- A character may appear only once in the whole dataset, in either Leader or Follower slot.
- Names are excluded if first or last name contains any whole word: boy, girl, lad, lass, man, woman (also ladd).

Accordion behavior

- Only one panel can be open at a time.
- Collapsed row shows: bib # | color swatches + names | score.
- Expanded row shows: Raw Score first, then leader and follower rows (with color picking).
- Clicking inside expanded details does not collapse the accordion.

Sort/filter freeze while editing

- While a panel is open, the list does not re-sort or re-filter, even if scores change or the sort/filter dropdown changes.
- Re-sort/re-filter happens when the user collapses the open panel or opens a different panel.
- Changing the sort/filter dropdown always closes any open panel and applies the new option immediately.

Raw scores

- Label is "Raw Score".
- Entered with 4 digit dropdowns (0-9), displayed as XX.XX (e.g. 87.43).
- Score range: 0.00 to 99.99.
- Summary score area is blank until the score has been touched/changed.
- Once any digit changes, the score shows in the collapsed header immediately.
- A couple counts as scored only if raw score is greater than 0.0 (not merely touched at 0.00).

Assign Random Scores

- Dropdown action (not a persistent sort mode).
- Sets every couple to a random score between 30.0 and 99.9.
- Marks all as touched, switches sort to Sort by Raw Score, and closes any open panel.

Sorting and filtering

Dropdown options:

Event System Pro - Application Rules

- Sort by Bib #: ascending bib number (default).
- Sort by Raw Score: highest score first; unscored/touched-at-zero at bottom; bib # breaks ties.
- Sort by Leader's Last Name: A-Z; bib # breaks ties.
- Sort by Follower's Last Name: A-Z; bib # breaks ties.
- Unscored Only: hides couples with a non-zero raw score.
- Assign Random Scores: bulk random scoring (see above).

Additional sort rules

- When 100% complete is first reached, sort automatically switches to Sort by Raw Score.
- Unscored Only treats a couple as unscored if never touched, or touched but still ≤ 0.0 .

Progress and submit

- Top of page shows Percent Complete bar (replaces old "Judging" header).
- Progress = couples with non-zero raw score / 20 x 100.
- Text: Percent Complete: X%.
- At 100%, the bar becomes a Submit button.

Duplicate raw scores

When an accordion closes (collapse, switch panels, or change sort/filter while one was open), if that couple's raw score matches another couple's score (> 0), open the Duplicate Score dialog.

Dialog rules

- Title: Duplicate Score.
- Close X in top-right (dismisses without changing scores).
- Two choices using leader and follower first names: put the current couple higher, or put the other couple higher.

Resolution logic

- Preferred fix: raise the chosen couple's score by +0.1.
- If +0.1 would collide with someone else's score: leave the chosen couple alone and lower the other duplicate couple by 0.1 instead.
- Scores stay within 0.00-99.99.
- After a choice, if sort is Sort by Raw Score, the list re-sorts to reflect new scores (including when another panel is still open).

Color picking

- Each leader and follower can have two colors: top and bottom.
- Colors are chosen from a fixed palette (8 columns x 14 rows).
- Palette icon opens the dialog if no colors yet; swatch opens it if colors exist.
- First click sets top color; second click sets bottom color, then auto-save and close.
- Titles: Pick Top Color for {firstname}, then Pick Bottom Color {firstname}.
- X cancels without saving.
- Reopening shows prior selections; first click replaces top, second replaces bottom.
- After one pick in a session, clicking the backdrop saves that one color and closes.
- Color swatches appear in the collapsed summary when at least one color is set.
- Colors are stored per bib + role (leader or follower).

Name display in summary row

- Names are shown as Leader * Follower.
- If space is tight, names shorten progressively: both full -> leader initial -> follower initial -> both initials.
- Shortening accounts for space taken by color swatches.

Event System Pro - Application Rules

Mobile and form behavior (Login / Register)

- AppTextField on mobile scrolls focused field into view when keyboard opens.
- Tapping the field container focuses the input.
- Default enterKeyHint: done (single-line) or enter (multiline).
- Default inputMode: text (password fields excluded).
- Register numeric fields use inputMode: numeric with max lengths on phone/zip fields.

Technical constraints (implicit but enforced)

- No @mui/icons-material - icons are local SVGs (CloseIcon, PaletteOutlinedIcon, etc.).
- Judging entries are generated once per page load (random bib numbers and names are fixed for that visit).
- Score digit dropdown clicks must not toggle the accordion (stopPropagation).
